Enterovirus Type 71 Vaccine, Inactivated (Human Diploid Cell) in Vial

[Description]
The vaccine is a slight milky-white suspension. Stratified precipitate may form which can be dispersed by shaking.
Active substance: Inactivated Enterovirus Type 71 (EV71) antigen.
Excipients: Aluminum hydroxide, glycine.
There is no preservative in this product.

[Indications]
The vaccine is indicated for children from 6 months to 5 years old for prevention of hand, foot and mouth disease (HFMD) caused by Entrerovirus Type 71 (EV71).

[Strengths]
1 dose (0.5 ml per vial) contains 100U inactivated EV71 antigen.

[Dosage and Administration]
Dosage:
The primary immunization consists of two doses with an interval of one month, 0.5ml per dose.
It has not been determined if a booster dose is required.
Method of Administration:
For intramuscular injection only. Prior to vaccination, the vaccine should be well shaken in order to obtain a homogeneous turbid white suspension. Inspect visually prior to administration. Stratified precipitate may form which can be dispersed by shaking. The vaccine should not be used if foreign particles are present in the suspension. The vaccine should be used immediately after opening.

[Adverse reactions][Contraindications] and [Precautions]
See package insert for details.
