

Bleed for carton:

The diagram illustrates the bleed requirements for a three-panel carton layout. The layout consists of three main panels, each 2mm wide, separated by 0,5mm gaps. The top and bottom edges of the panels have a 1mm bleed, while the side edges have a 2mm bleed. The central fold line is marked with a 0,5mm gap. The dimensions are indicated by arrows and text labels: 1mm for top and bottom bleeds, 2mm for side bleeds, and 0,5mm for the gaps between panels.
