

FERRO 2000 Solution For Injection

Composition/100ml:

Each Ferro 2000 Solution for Injection contains Iron 200mg (as dextran complex) and phenol 5mg (excipient qs 1 ml).

Product Description:

A dark brown solution, slightly viscid.

Pharmacodynamics:

Iron (as dextran) is an antianemic agent acting by significantly increasing the hemoglobin level. After administration, the iron is stored in the tissues and then gradually released from the complex with the dextran. It is incorporated into hemoglobin in the form of proteins such as ferritin and hemosiderin. Iron is administered as an iron dextran complex to avoid toxic effects of free iron.

Pharmacokinetics:

Iron dextran is absorbed after injection primarily through the lymphatic system. About 60% of iron dextran is absorbed after 3 days and up to 90% after 1 to 3 weeks. The absorption of iron dextran is sufficiently rapid to prevent any fall the haemoglobin content below the critical level and to restore acutely pathological level to normal.

Indication:

Piglets – Treatment and prevention of iron deficiency anaemia.

Routes of administration:

Intramuscular injections

Dosage:

Piglets – 200mg of iron per piglet by deep intramuscular, preferably in the thigh muscle, within 3 days of birth, equivalent to single injection of 1 ml.

Contraindications:

Do not use in case of known hypersensitivity to iron (as dextran complex).

Warnings and Precautions:

i) Special warnings for each target species

None

ii) Special precautions for use in animals

Adhere strictly to aseptic technique during the injection.

iii) Special precautions to be taken by the person administering the veterinary medicinal product to animals

Care should be taken to avoid accidental injection. In case of accidental self-injection, seek medical advice immediately and show the package leaflet or label to the physician.

iv) Other precautions

None.

v) Special precautions for the disposal of unused veterinary medicinal product or waste materials derived from the use of such products

Any unused veterinary medicinal product or waste materials derived from such veterinary medicinal products should be disposed of in accordance with local requirements.

Interactions with other medicaments:

None known.

Statement on usage during pregnancy and lactation:

Not applicable.

Adverse Effects:

Colour at the injection site.
Occasionally, cases of anaphylactic shock, some fatal, have been observed following administration of iron (as dextran).

Overdose and Treatment:

None known.

Incompatibilities:

None known

Storage Conditions:

Keep below 25°C. Protect from light.

Withdrawal Period:

Meat and offal : 0 days

Packing:

Bottle of 100 ml.

FOR VETERINARY USE ONLY
