What Snake Brand Sport Oil is used for?

SNAKE BRAND Sport Oil is used for relieving mild to moderate muscular and joint aches and pains, muscle cramps, shoulder aches and stiff neck.

How Snake Brand Sport Oil works?

SNAKE BRAND Sport Oil contains counterirritants: methyl salicylate 31%v/v, menthol 1%w/v, camphor 1%w/v and eucalyptus oil 1%v/v which are formulated as medicated oil for external use to relieve pain.

Before you use Snake Brand Sport Oil:

- When you must not use it?
 - a) If you are having history of hypersensitivity to aspirin, salicylates, menthol, camphor or eucalyptus oil.
 - b) If you are thinking to apply this product to infants below 2 years old.
- Before you start to use it.
Please consult your doctor/ pharmacist prior to using this product if you are pregnant, breastfeeding or having other concomitant skin problem.

- Taking other medicines.

When Snake Brand Sport Oil is used while you are on warfarin, excessive application may increase tendency of bleeding.

How to use Snake Brand Sport Oil:

- How much to use

Apply to the affected area not more than 3 times daily. Rub or massage gently.

- When to use it?

SNAKE BRAND Sport Oil can be applied before or after exercise.

- How long to use it?

Use only when necessary or in accordance with professional medical advice.

- If you forget to use it.

Apply the oil on the affected area when necessary as soon as you remember.

- If you use too much (overdose)

Symptoms of methyl salicylate overdose:

Salicylate intoxication can occur after ingestion or topical application of methyl salicylate. Mild chronic salicylate intoxication, or salicylism, usually occurs only after repeated use of large doses. Salicylism can also occur following excessive topical application of salicylates.

Symptoms include dizziness, tinnitus, deafness, sweating, nausea and vomiting, headache, and confusion, and may be controlled by reducing the dosage. Symptoms of more severe intoxication or of acute poisoning following overdose include hyperventilation, fever, restlessness, ketosis, and respiratory alkalosis and metabolic acidosis. Depression of the CNS may lead to coma; cardiovascular collapse and respiratory failure may also occur.

Symptoms of camphor/menthol overdose:

Ingestion of significant quantities is reported to cause symptom: severe abdominal pain, nausea, vomiting, vertigo, ataxia, drowsiness, and coma; instant collapse in infants after the local application of menthol/camphor to their nostrils. Seizures may be the first clinical sign of severe toxicity of camphor; however, seizures are usually self-limited. Severe toxicity of camphor can result in delirium, visual hallucinations, cerebral edema, and status epilepticus. Systemic toxicity may include hypotension, tachycardia, respiratory failure, and death.

Treatment

The stomach should be emptied by gastric lavage or administration of oral activated charcoal. Fluid and electrolyte management is the mainstay of treatment with the immediate aim of correction of acidosis, hyperpyrexia, hypokalaemia and dehydration if present.

Any convulsions must be controlled first through supportive care including anticonvulsant therapy.

While you are using it:

- Things you must do.

Follow the dosing instruction. Ensure cleanliness of the affected area before and after applying the product.

- Things you must not do.

The product must not be applied around eye area, damaged skin or open wound. Do not apply to children below 2 years old. When older children are treated, do not apply into nostrils. It is dangerous to place any camphor-containing product into the nostril of children. A small amount applied this way may cause immediate collapse. This product is used externally on the skin only, not to be taken orally.

- Things to be careful of.

Please apply this product with caution in pregnant women, breastfeeding mothers and children following professional advice from
