Ultiwell Injection 1mg

Not for epidural or intrathecal injection.
[Composition] The key component is remifentanil hydrochloride and the excipient is glycine.
[Appearance] A white or off-white loose blocks.
[Indication] Ultiwell is indicated as an analgesic agent for use during induction and/or maintenance of general anaesthesia during surgical procedures including cardiac surgery, and also for continuation of analgesia into the immediate post-operative period under close supervision, during transition to longer acting analgesia.
Ultiwell is indicated for provision of analgesia and sedation in mechanically ventilated intensive care patients.
[Strength] 1mg (calculated as remifentanil base)
[Route of Administration] For intravenous administration after reconstitution and dilution (see the package insert for details).
[Adverse Reactions][Contraindications][Precautions] See the package insert for details.

Ultiwell Injection 1mg

[Package Size] 1mg of remifentanil lyophilized powder in 2ml vials in cartons of 5 vials, this box includes 10 packets x 5 vials/carton.
[Storage Condition] Store below 25°C, well-sealed.
The reconstituted solution of Ultiwell is chemically and physically stable for 24 hours at room temperature(25°C.). However, Ultiwell does not contain an antimicrobial preservative and thus care must be taken to assure the sterility of prepared solution, reconstituted product should be used promptly and any unused material discarded.
