What HOTIN[®] Cream Strong is used for

Relieves muscle stiffness, muscle pain, and joint pain.

How HOTIN[®] Cream Strong works

It contains menthol and methyl salicylate. Menthol brings a wonderful cooling sensation by stimulating thermos receptors in the skin cells which help your body recognize temperature changes. Your skin doesn't actually change temperature. Instead, menthol causes a signal to be sent which your brain interprets as cold, relieving the uncomfortable heat of inflammation. Menthol and methyl salicylate work by causing the skin to feel cool and then warm. These feelings on the skin distract you from feeling the aches/pains deeper in your muscles and joints.

Before you use HOTIN[®] Cream Strong

• When you must not use it

Do not use it if you are allergic to any ingredients of HOTIN[®] Cream Strong. This product is contraindicated in children below 2 years of age. Caution must be exercised when older children are treated. For external use only. Do not use if you are pregnant, trying to get pregnant or think you may be pregnant.
